Development of a Master Plan to guide the continued development of the St. John's Episcopal School Campus over the coming years.

The current school campus is 20 plus years old and has, and continues to support the school's academic, faith, and athletic program missions. In order to maintain this support, and further accommodate current programs, several facility additions and improvements are being considered.

The Austin Company provided overall site and facility programming and master planning for a new middle school building, renovated elementary school building, renovated art classroom, renovated multi-purpose/office building and renovated kitchen, library, fitness center and offices.
